

Contact Run 1 - MRED-ITP / ACG / OCU Deep Analysis v1.1

Executive verdict

The MRED-ITP layer is useful as an exploratory information-structure and ocular-release audit. The father/avatar cluster remains the primary MRED/KHT-topo finding from earlier modules. This layer adds mixed support and no strict combined ACG+OCU pass.

Boundary

LZ-style complexity is a compressibility/diversity proxy, not literal thermodynamic entropy. Fp1 blink timing is a rough ocular event-boundary proxy, not proof of memory encoding. No OSM biology or hidden-Y mechanism is inferred.

Phase summary

phase	mean complexity proxy	blinks	blink/min
CONTROL_1	0.911	7	1.386
TARGET_1	0.936	3	0.599
CONTEXTUAL_OVERRIDE_1	0.891	5	0.999
BASELINE_1	0.890	31	15.500
WASHOUT_1	0.921	3	1.500
WASHOUT_2	0.938	1	0.500
WASHOUT_3	0.910	7	3.500
BASELINE_2_REFLECTION	0.916	2	1.000

Target anchor summary

anchor	C strike	C settle	CSI	blink suppression	blink release	ORI	MRED quadrant	MRED lock
A1 Pensacola	-0.003	-0.002	-0.597	4.800	0.000	0.461	MR_HIGH_ENC_LOW	False
A2 Father/avatar	0.009	-0.021	0.596	0.000	0.000	-0.563	MR_HIGH_ENC_HIGH	True
A2b Father TSP	0.016	-0.028	1.224	0.000	4.000	-0.037	MR_HIGH_ENC_LOW	True
A3 Existential	-0.009	0.011	-1.375	0.000	0.000	0.000	MR_HIGH_ENC_HIGH	False

anchor	C strike	C settle	CSI	blink suppression	blink release	ORI	MRED quadrant	MRED lock
A4 Late release	0.002	-0.007	-0.081	0.000	0.000	0.000	MR_HIGH_ENC_LOW	False

Target vs Override specificity

anchor	Target-Override CSI	Target-Override ORI	Target-Override ITP
A1 Pensacola	-1.068	0.075	-0.505
A2 Father/avatar	1.058	1.037	1.244
A2b Father TSP	2.137	1.562	2.157
A3 Existential	-0.135	0.000	-0.070
A4 Late release	-0.620	0.000	-0.322

Interpretation

- A2b father/avatar TSP follow-through showed the strongest Target complexity-settlement index.
- Target blink rate was low overall, but blink-release evidence was sparse; OCU is supportive at most.
- Baseline 1 had many Fp1 blink-proxy events relative to later phases, likely reflecting settling/ocular/artifact context.
- Use MRED-ITP as convergence and falsification support, not as a thermodynamic proof.
